**“For a new conception of Toxicology in Angola
to contribute in improving the quality
of life for people”**

Introduction:

Improper and excessive use of chemicals has caused adverse effects to human health and the integrity of the environment, causing individual and collective accidents, because of chemical disasters, acute and chronic poisoning may result from exposure to chemicals found in drugs, air, water, pesticides, food, plants, venomous or poisonous animals, products for industrial use, household products and there may be clinical or biochemical consequences of immediate or delayed fashion.

General Objectives:

Deepen the knowledge and research of toxicological problems encountered by humanity today and contribute to protecting the health and environment.

Encourage academic, scientific, social exchange in joint research projects that enable sustainable development of the countries involved.

Present the main results of the organization and development of toxicology in Angola and worldwide.

Contribute to a new conception of Toxicology in Africa to improve the quality of life for people.

Themes:

Toxicology, Education, Society.
